

Make Your Own Robin

Use the template to make your very own flying Robin with wings that flap. Why not make several to make a Robin mobile? Or hang them from your bedroom ceiling?

You will need:

- Scissors.
- Glue.
- Pens or pencils.
- Needle and thread.

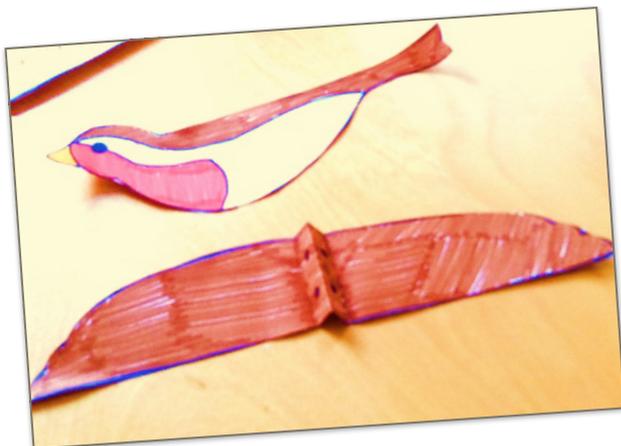

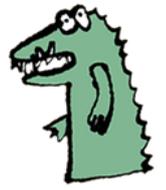

1. Colour in your Robin.

2. Cut out the front, back and wings.

3. Flip the wings over and colour in the other side.

4. Glue the front and the back of the Robin together.

5. Fold the wings in half down the middle dotted line and fold each wing back in the opposite direction along the second dotted line to make a 'w' shape.

6. Stick the wings onto the body on the area marked 'wings'.

7. Thread the lengths through the two black 'dots'

Remember to get help from an adult when using a needle and thread!

8. Finished!

Tie all the threads together above your robin.

You can use the threads to move your robin through the sky, and shake him up and down to flap his wings.

Be careful with
scissors!
